

## DBDOC – The Essential Companion for your ABB® Harmony INFI 90® System

### Current support for Unicode Characters in DBDOC

Each new release of DBDOC provides increased support for Unicode characters in DBDOC applications. It is our goal to ultimately provide complete Unicode support throughout all DBDOC applications to our clients internationally. The specific Unicode support provided in different areas of DBDOC is summarized below.

### Build System

- Excellent Unicode support throughout the build system. Unicode characters are supported in file names and build paths.

### Hyperview

- Full Unicode Support:
  - Unicode characters are fully supported in Composer and operator graphics.
  - Unicode characters are fully supported in text annotations.
- Partial Unicode Support:
  - Unicode characters are supported on text documents (e.g. databases) when Hyperview is run in HTML mode (with `/showHTML=true` on the command line).  
**Note:** *There is only a preliminary implementation of HTML mode in DBDOC 10.3. Some display issues have yet to be fully resolved. Only use HTML mode if necessary, and be prepared for some minor display problems.*
- No Unicode Support:
  - There is no support in DBDOC for searching for Unicode text.

### Further Information

Please contact [geoff@gmcl.com](mailto:geoff@gmcl.com) for further information about the support for Unicode characters DBDOC provides.
